

5 Essential Elements of Workplace Health and Safety - How to Reevaluate and Improve Your EHS Processes

written by Lauri Moon | September 23, 2022

The biggest fear when it comes to workplace health and safety is that something will get missed...and then that “something” becomes a serious compliance issue, fine, or worse: an accident. If this is your situation - if you find yourself responsible or partly responsible for the health and safety of your people but are worried there is some key element you are missing - we have you covered.

To start, you need to ensure that your system - how you, your company, and employees go about their health and safety processes - covers five essential elements.

Join Jill James, Chief Safety Officer at HSI, former OSHA inspector, and 28-year veteran in the health and safety space as she discusses the following elements and how all safety champions - whether you're new to the game, already a seasoned EHS leader, or you wear many hats - can reevaluate and improve your processes.

- **Administrative must-haves:** Why you need a paper trail, and what are the specific workplace documentation needs.
- **Policies:** Put the right P&Ps in place, and know which laws apply to you.
- **Training:** Identify specific trainings for individual job roles, and requirements for compliance.
- **Tracking risk:** Different types of risk-tracking and who should be involved.
- **Reinforcing behaviors:** How to introduce enforcement and reinforcement of your new processes.

Through understanding these five essential elements, you can create a comprehensive safety program and a framework to work with your company's safety

professionals. Register now!
