

ADOPT NEW TECH: How Robotic Bin Picking Can Excel Over Traditional Methods

written by Lauri Moon | December 30, 2020

Hear benefits of an automated bin picking solution, how to determine good applications for automation plus manufacturing success stories.

About this Event

Automated bin picking has existed for many years with varying challenges and past barriers to entry. Today, recent and accelerating advancements in technology make robotic bin picking more reliable and accessible than ever, for the right application.

Join IMC sister center, IMEC, and FPE Automation for a webinar on the cutting-edge state of the industry and discussion of the following topics:

- The challenging nature of turning chaos into order
- Automating bin picking with robots vs. other feeding methods
- What it can mean for your process to achieve flexible, automated bin picking
- What makes a good application candidate
- Current solutions and customer examples touching on Universal Robots' ActiNav system

Presented in partnership with FPE Automation.
