

# Energy Industry Overview Map - Battery Storage

written by Lauri Moon | May 27, 2025

The Energy & Manufacturing in Appalachia (EMA) project helps manufactures understand and navigate opportunities in the vast energy supply chains.

The EMA team, along with outside experts, have developed supply chain maps for each energy segment or sub-segment to help manufacturers navigate these industry sectors. The supply chain maps provide introductory overview of the market size, key drivers, supply chain needs, and components for each of the specific segments. Additional resources are provided to learn more about the industry and keep up to date on the latest advancements, opportunities, and potential funding opportunities as well.

The Battery Storage energy overview was drafted by Punit Shetty and Ray Strauss, both Principal Consultants with the Alliance for Manufacturing and Technology (AMT) and project partner with EMA. AMT is a key partner and driver in the New Energy New York (NENY) coalition. The coalitions mission is to meet the demand for US battery products by accelerating the battery research, development, and manufacturing ecosystem.
