# CMMC Webinar – An Overview of the New Government Requirement and Risk Mitigation

written by Lauri Moon | September 3, 2021

As you listen to the news these days and over the past several months – the magnitude of cybersecurity crimes and significant events are increasing exponentially.  These events have led many companies and Risk Managers to take a serious look at their cybersecurity prevention activities.  Those affected include both Private, as well as Government Agencies regardless of size.  The Department of Defense (DoD) recognized this ever increasing threat and is in the process of launching the Cybersecurity Maturity Model Certification (CMMC) that will be required throughout the entire supply base.

Data security is key, but demonstrating continual improvement, proactive risk mitigation and cybersecurity certification may be part of Customer Contractual Requirements, and can be a market differentiator.  If your company is reviewing your cybersecurity controls and risk assessment, or considering Information Security Management or CMMC Certification – please join us for this webinar which will cover:

- Understand the background of the CMMC
- Understand the CMMC requirements
- Review examples evidence needed for CMMC audits
- Understand the current status of the CMMC Process
