

Commercial & Industrial (C&I) Manufacturing Solutions - PECO Financial Incentives

written by Lauri Moon | August 26, 2021

Improving energy efficiency and reducing energy-related costs can sometimes require investment in new equipment, technology, or controls. Often, companies are eligible to apply for funding assistance to offset the cost of energy efficiency improvement efforts but are uncertain where to find these incentives.

During this webinar, learn about financial incentives available for small to mid-sized manufacturers throughout Pennsylvania to improve the energy efficiency of their facilities and productivity of their businesses. A representative will also discuss prospects for funding available through PECO, including incentives for upgrading motors, variable-frequency drives, compressed air systems, lighting, chillers, and much more. Additional funding prospects will be discussed by a PennTAP advisor.

Join this webinar to learn more about opportunities for energy savings at your facility and financial incentives from PECO.
