

Conducting a CMMC Self-Assessment

written by Lauri Moon | January 9, 2023

To avoid wasting time and money as you prepare for CMMC certification, it is important to understand your starting point. A self-assessment is a great tool that can reveal your organization's strengths and gaps that need to be closed.

The challenges with a self-assessment are to have a good understanding of what is required and how well your systems and operational practices match up. We'll be walking through a self-assessment together in this session that will cover:

- 1. What standards should you use to prepare a self-assessment?
- What steps should be followed?
- Who should be involved?
- How to correctly determine your current state?
- How should results be summarized and presented to management?

Join IMC and our third-party partner Core Business Solutions for this hands-on session to help you get started on your self-assessment.
