

Could You Do More to Reduce Your Manufacturing Workplace Safety Risks?

written by Lauri Moon | June 10, 2021

As we confront the challenges of the global COVID19 pandemic, it has brought a new focus to the health and safety of onsite frontline employees.

Additionally, most manufacturing industries face a skills shortage for operators, technicians, and engineers. This shortage means it's of utmost importance to the business that the workforce both **be safe** and **feel comfortable** so they can focus on the job at hand.

One outcome of COVID19 has been a rapid acceleration of digital transformation initiatives. To improve workplace safety, progressive manufacturing companies have moved away from manual paper and spreadsheet-based systems. They have invested in modern, integrated enterprise EHS systems that enable mobile devices, real-time digital data gathering, leverage mobile with smartphone and tablets, and drive proactive initiatives using predictive analytics, Artificial Intelligence (AI) and Industrial Internet of Things (IIoT).

Join this webinar to hear how your company can improve workplace safety, gain a competitive advantage in efficiency and quality, while increasing the ability to hire and retain top talent through a modern enterprise approach to health & safety.

- Addressing new safety challenges for MFG Frontline Workers
- Safety as a New Employee and Enterprise Priority
- EHS Impact on Business Success
- Enterprise Health & Safety Software and How it's Different
- Key Health & Safety Software Capabilities
