

How to Cut Energy Costs Without Adding to Your Workload

written by Lauri Moon | May 4, 2026

**ENERGY &
MANUFACTURING®**
— in Appalachia —

Rising energy costs are a constant pressure, but finding time to deal with them is another story.

In this webinar, Edgecom Energy shows how busy operations and finance leaders can reduce energy spend without taking on another complex project. We'll walk through a proven five-step framework that starts with your utility bills, and turns it into a clear, low-effort path to savings.

You'll learn how to uncover hidden cost drivers, identify simple metering opportunities, and reduce peak demand without disrupting your day-to-day operations. No deep technical expertise required, just practical steps designed to fit into your existing workload.

If your facility spends more than \$10,000 a month on energy and doesn't have time to chase down solutions, you won't want to miss this webinar led by experts from Edgecom Energy. Eric Asagba is a Program Manager and Dylan Calvert a Senior Solutions Engineer.
