

Defending Against Cyber Attacks: Implementing an Information Security Program

written by Lauri Moon | October 19, 2021

This presentation will touch on recent threats to information security with specific accounts on how these breaches occurred and how to protect your company.

Protecting a company from cyber attacks can be a complex challenge. There are many moving parts and an ever-changing threat landscape. Is it that difficult? This presentation will review what your company can do to get out in front of a possible security breach by implementing best security practices across your organization. We'll dive into what it takes to build a solid foundation of secure practices. Also, we'll touch on recent real-world threats and what you can learn to protect your company.

Main Topics:

- Information Security Overview
- Vulnerability Management
- External Perimeter Security
- Infrastructure & Endpoint Security
- Security Awareness
- Putting it all together

Target Audience: CEO, CIO, CISO, IT manager and other company leaders with oversight of technology and security.

Why you will want to attend:

Often security takes a back seat to many other pressing issues within a company. The purpose of this presentation is to enlighten leadership to an area in which they may not have been informed.
