Developing a Cybersecurity Budget

written by Lauri Moon | September 14, 2022

Planning for cybersecurity protection improvements in a company can seem like a "needing to write a blank check." Uncertainties regarding current technologies, upgrades and updates needed, IT and cybersecurity staffing or outsourcing, can raise significant questions about the expected costs. It is particularly difficult to establish a budget with the confusing terminology surrounding IT and cybersecurity.

This Webinar will help clear much of the confusion when it comes to budgeting for cybersecurity. Core's Security Solutions team will discuss the primary cost drivers of cybersecurity including:

- Technologies needed to build a cybersecurity foundation
- How to evaluate technical and operational options
- Ways of managing IT and cybersecurity staffing as well as outsourcing costs
- Approaches for determining annual costs for maintaining cybersecurity

Please join us as we discuss how to get your arms around cybersecurity costs, and a practical approach to keep cybersecurity affordable.
