

Energy and Waste Reduction through Continuous Improvement

written by Lauri Moon | January 19, 2022

Join IMC and PennTAP to learn more about Economy, Energy, and Environment (E3) assessments where we pair energy conservation and waste reduction with continuous improvement.

During an E3 event, we provide E3 training for a team of employees at your company. A continuous improvement expert works with your team to create a Value Stream Map (VSM) of a product line or process at your company to identify areas of where downtime, product build-up, and waste are occurring.

Jeff Kopenitz, IMC's Continuous Improvement Expert, and PennTAP will share the discuss the E3 process, continuous improvement, and company success stories as a result of participating in one of our E3 events.
