

Building Operator Certification (BOC) and Building Re-tuning (BRT)

written by Lauri Moon | January 3, 2017

Save \$\$ on Facility Operating Costs. This facility operations workshop will show you how to save energy and reduce your facility operating costs. Two parallel training tracks will focus on Building Operator Certification (BOC) maintenance points and Building Re-tuning (BRT) topics.

Building Operator Certification Points (BOC)

The BOC track is designed to provide up-to-date information on the latest tools, trends and best practices for building operators. BOC maintenance points will be earned. Registrants of this track are also invited to participate in BRT walk-throughs of select Penn State campus buildings. Earn 7 BOC maintenance points.

Building Re-tuning (BRT) Training

The BRT track will outline a systematic process for evaluating building performance and identifying low-cost/no-cost opportunities for reducing energy waste. Practical hands-on BRT walk-throughs will take place at a variety of Penn state campus buildings.

Who should attend?

Building operators, maintenance staff or technicians, energy managers, facility managers, building engineers and HVAC technicians are encouraged to attend.

All participants will be entered into a drawing for various energy audit equipment to measure air flow, temperature, distance and energy.

All registration fees for this event must be paid by credit card.

Early-Bird Registration until January 20th: \$15

Registration after January 20th: \$25
