

Financing Energy Improvements to Increase Efficiency Within Your Facility

written by Lauri Moon | March 31, 2021

Improving energy efficiency and reducing energy-related costs can often require investment in new equipment, technology, or controls.

Often, many companies are eligible to apply for funding assistance to offset the cost of energy efficiency improvement efforts, but are uncertain where to find these incentives. Eligibility of sites and projects, as well as project payback estimates, should be considered carefully. This webinar will cover funding opportunities for small to mid-sized companies throughout Pennsylvania, including Act 129 and Department of Environmental Protection's Small Business Advantage Grant. Additional funding prospects will be shared by PennTAP.
