

Identify, Evaluate & Manage Current & Future Risks

written by Lauri Moon | September 25, 2017

Successful operational risk management demands a clear understanding of internal company practices, policies and systems to ensure they are adequate to protect the organization from loss due to a change in market conditions or operational difficulties.

Most senior leaders are very well aware of the financial challenges their companies may face, but are less familiar with these operational risks, and don't know how they can introduce changes to practices and systems that will turn them into potential engines for improved productivity and profit.

Join DuPont Sustainable Solutions where they will also report out on their 2017 Global Operational Risk Survey. The survey, which includes feedback from C-suite executives, vice presidents, directors and managers across a wide variety of industries, brings valuable insights into ways in which organizations can help protect, extract and create value through operational risk management and productivity improvements.

During this webinar you'll hear how peer companies are handling risk management within their organizations and hear best practices:

- to better manage your risk portfolio across the entire value chain,
- to create opportunities and
- to extract value from better managing uncertainties.

Speakers

 **Nicholas Bahr, Global Practice Leader, Operational Risk Management, DuPont Sustainable Solutions**

Nicholas Bahr is the Global Practice Leader for Operational Risk Management at DuPont Sustainable Solutions. In this role, he and his global team help clients

identify, prioritize and reduce risk throughout their operations. He over 30 years' experience and is an internationally recognized thought leader and expert in operational and enterprise risk management, process safety, resiliency, system safety and security. He has experience in business expansion and start-up for global operations, as well as local/regional expansion in Europe, Middle East, South America, North America and Australia. He as worked extensively with NASA (National Aeronautics and Space Administration) leading safety and reliability teams that designed, built, tested and flew satellites and space probes. He is the author of the book System Safety Engineering and Risk Assessment which is used by the Federal Aviation Administration (FAA) as their aviation system safety model.

✘ **Alfonsius Ariawan, Global Solutions Architect, DuPont Sustainable Solutions**
