

Improve Your Bottom Line: Reduce Metal Manufacturers Processing Energy and Waste

written by Lauri Moon | March 31, 2021

Energy use is relatively high in a variety of machining and metal fabrication facilities. For metal casting foundries energy costs typically accounts for 5-10% of the overall operating costs.

In this webinar, PennTAP will identify cost-effective practices and technologies to increase energy efficiency and pollution prevention ideas and suggestions that can help metal manufacturers facilities reduce energy use, waste, and operate more efficiently while saving money.
