

Northcentral Pennsylvania Energy Efficiency Roundtable: Compressed Air Systems

written by Lauri Moon | April 19, 2021

Compressed air is among one of the highest cost and least energy efficient systems in manufacturing. If you are responsible for or depend upon compressed air in your plant or building, join our North Central Pennsylvania Energy Efficiency Roundtable webinar on April 27th.

Hank Van Ormer, founder of Air Power USA Inc., and Don Van Ormer, Senior Air Specialist, will discuss best management practices and opportunities to reduce energy costs and increase the performance of your compressed air system. Specifically, the webinar will identify common areas in industrial facilities where demand-side energy reductions can be found.

If you have specific questions about issues, problems, or aspects of your compressor system, Air Power USA representatives will be available during this webinar to discuss them with you.
