

Online Resources for Manufacturers from the Industrial Assessment Center

written by Lauri Moon | April 22, 2024

The Industrial Assessment Centers (IAC) can help small and medium sized manufacturers save energy, improve productivity, and reduce waste by providing no-cost technical assessments conducted by university-based teams of engineering students and faculty. The IAC program has already conducted over 21,000 assessments and made recommendations that amount to an average yearly savings of nearly \$140,000.

Using this large database of assessments, the IAC has developed numerous online resources that manufacturers can utilize to learn more about increasing their own efficiency and lowering their energy costs. From searching the database of assessments by NAICS code, to watching informative webinars, to reviewing technical documents the IAC website has a plethora of useful information at your fingertips.

We are pleased to share this Fuel for Thought webinar featuring experts from the US Department of Energy IAC as they walk us through online resources to help you navigate your path to energy efficiency and sustainability.
