Optimize Your Plant's Maintenance and Repair Program with a Connected Worker Platform for SAP

written by Lauri Moon | October 9, 2020

The impact of COVID-19 and the subsequent changes in how factories are located, staffed, managed and digitized are placing pressure on manufacturing operations leaders. This is certainly the case for companies that rely on successful MRO programs, where the nature of work is forcing changes to traditional maintenance and repair procedures. Emerging technologies such as artificial intelligence (AI), augmented reality (AR) based remote collaboration, and connected worker solutions are now central to strategies that are helping to optimize plant operations at a time when enterprises most need it.

Connected worker solutions help connect factory workers with various digital tools to improve the safety, quality and productivity of the jobs they perform. These solutions, combined with SAP PM, can help transform and reimagine maintenance, repair and operational processes for today's new normal.

In this webinar, you will learn:

- How the manufacturing landscape has changed since the onset of the COVID-19 pandemic, introducing a new normal for work environments
- How connected worker technology is helping to ensure business continuity and improved levels of safety, quality and productivity
- How a connected worker platform can help extend the value of SAP PM, empowering workers with the digital tools they need to succeed in modern operating environments – avoiding unexpected down time, lost production and increased operational costs.

Speaker

Russ Fadel, CEO & Co-Founder, Augmentir

Russ Fadel is a serial entrepreneur and the CEO and Co-Founder of Augmentir. Prior to founding Augmentir, Russ founded 4 successful companies in the industrial software sector, including the two most recent – ThingWorx, the leading Industrial IoT (IIoT) platform company (acquired by PTC), and Lighthammer, the pioneer in enterprise manufacturing intelligence software (acquired by SAP). Russ has been intimately involved in the last three software revolutions around humans and machines in manufacturing and service. Augmentir is a continuation of this theme.
