

Webinar: Transitioning into 3D Printing & Metal Additive Manufacturing

written by Lauri Moon | May 11, 2018

Join us for this webinar focused on the advantages of additive manufacturing for small and mid-sized businesses. Additive manufacturing, the 3D printing of functional components in metals and polymers, has been creating a lot of hype lately and the reality is just as exciting.

Some benefits of additive manufacturing include:

- improved performance
- reduced lead time and overall cost
- agile and distributed production

Risk aversion and capital investments can hinder adoption of this process in small and mid-sized businesses that are critical to the emerging additive manufacturing supply chain. This webinar will explore a layered approach that can help companies transition into additive manufacturing and provide examples and case studies to illustrate the effects. Future advancements shaping the additive manufacturing industry will also be discussed.
