

Webinar: Interested in Additive Manufacturing? Appropriate Next Steps

written by Lauri Moon | March 27, 2018

In this session, we will dig into practical next steps if you would like to pursue additive manufacturing within your organization. We will present key considerations in identifying parts that are the best candidates for AM, provide tips on how to design for additive manufacturing and lastly, offer guidance on the information you will need to get parts quoted and fabricated.

Facilitated by Catalyst Connection's Connie Palucka and led by 3Diligent's Cullen Hilkene and MAGNET's Dave Pierson, this webinar is part of a series that will describe additive manufacturing (AM), how manufacturers large and small are using AM today to advance their operations, and what next steps you can take to begin your own company's journey toward AM adoption.

Hosted by NIST-MEP, America Makes, and 3Diligent.
