

Webinar: Introduction to Additive Manufacturing

written by Lauri Moon | March 27, 2018

Introduction to Additive Manufacturing will introduce various concepts related to 3D Printing/Additive Manufacturing. In it, we will walk through the AM process from design to finished part, discuss AM industry trends and its relative place in the manufacturing ecosystem, and end with a few general use case applications.

Facilitated by Catalyst Connection's Connie Palucka and led by 3Diligent's Cullen Hilkene and MAGNET's Dave Pierson, this webinar is part of a series that will describe additive manufacturing (AM), how manufacturers large and small are using AM today to advance their operations, and what next steps you can take to begin your own company's journey toward AM adoption.

Hosted by NIST-MEP, America Makes, and 3Diligent.
