

Is Solar Right for My Business?

written by Lauri Moon | May 30, 2024

Many businesses and organizations are looking to lower their energy costs and often installing solar is a consideration. However, understanding the process, where to go, what the costs are, or not knowing what to ask can hinder businesses from exploring further.

What are my first steps? Are there incentives? How much will it cost? How do I find installers? Rooftop or ground mount system?

We are pleased to be joined by the experts from the PA Solar Center who can help answer these questions and more. They will provide some case studies, lessons learned, and discuss their G.E.T. Solar program. This program is offered by the PA Solar Center (a statewide nonprofit) to educate businesses, nonprofits, and community property owners on the benefits of going solar. They can provide free technical assistance and financial guidance to organizations who want to learn more about going solar — and how it can save them money.

During the webinar you will learn more about:

- Federal tax credits and grants that provide a minimum of 30% reduction on the system cost
- Free technical assistance from the PA Solar Center
- What to look for when selecting a solar developer
- USDA REAP program grants and loans that offer up to 50% for rural businesses and ag producers

Join the webinar to learn all these tips and more information about how the Clean Energy Manufacturing in Appalachia project can help you!
